# A.I COMMISSIONS

🕰️ Quick Start Guide 🕰️

==Welcome to AI Commissions.==

==*This short and sweet guide will get you setup with the AI in minutes!*==

==🔥🔥 *You made a smart choice - now let's get going, in seconds* 👇==

1. Accessing Everything - Members Area

To visit the **AI Commissions members area,** log in to your WarriorPlus account - and click your **username** in the red + click "**purchase history**":

There you will find all the recent purchases you made on Warrior - including links to all the Search GPT members pages.

2. Logging In To The Software

To access all the software tools. **visit the members page and scroll down to step 2, then create an account using the email you purchased with on WarriorPlus.**

If you ever need to login or create an account for a software tool, be sure to use the email address you purchased with on W+.

3. Getting Updates (To AI Commissions)

AI is constantly changing (in the last 30 days we have seen GPT Plugins, MidJourney v5, PhotoShop AI and more!). I do regular updates to the core AI tools, free training videos on AI updates, and also webinars with new training and tactics.

To ensure you get access to all this, hit reply to my "welcome email". I will send you a bonus AND it will ensure my email is whitelisted.

4. REQUIRED To Use AI Commissions

AI Commissions is a software that connects to Chat-GPT to run searches. Therefore, you will need to connect to Chat-GPT (OpenAI) to run the file:

CONNECT TO CHAT-GPT

AI Commissions connects to Chat-GPT, an AI that is owned by OpenAI. You will need an "API key" to use the tool. Therefore, if you don't already have an account with OpenAI, you will need to do the following:

1. Create an account with them https://platform.openai.com/account/api-keys
2. Get an API key - https://platform.openai.com/account/api-keys
3. Insert the API key into the settings page of AI Commissions and hit save
4. Then you have connected AI Commissions to the AI. Done.

6. My Latest "AI Tech Stack" - June 2023

OK here is my AI tech stack for June 2023, in the rough order which I use them:

1. **ChatGPT - https://chat.openai.com/chat**
   I use this for a whole range of purposes such as creating software, writing sales copy, and doing technical research. If you have $20/month I would definitely upgrade to "Chat-GPT Plus" (click on "your account" on the left) as it gives you access to GPT-4 which is the most powerful model & now also gives you GPT Plugins!

2. **RemixableAI - http://remixable.ai/**
   My own software suite, which is now approaching $300k in dev costs and basically automates every aspect of running a digital product business (either as an affiliate, Youtuber, list builder or product owner). This now has Chat-GPT fully integrated into the tool (for copywriting) along with 30+ training videos on AI. If you want to sell your own product this is indispensable. For example, Upsell 4 for SearchGPT lets you create unlimited AI graphics, and the wrap

those graphics into software tools (thus creating unlimited software tool). I then used Remixable AI to make me an entire sales letter + video which you can preview here https://remixable.net/ecover/ - this is made with Remixable, better than 90% of the pro sales letters you see on Warrior.. And yet *I'm not even bothering to sell it* (just including it as a bonus within Remixable). I really can't stress enough how much of a level up Remixable AI is for everything I do)

3. **MidJourney - https://www.midjourney.com/**
The top AI graphics tool. Word is they are entering "alpha" on a website hosted version of the tool - no more Discord in June? Hope so! 90% of the images on my site are done with MidJourney. It is simply the best tool for graphics out there. Only problem with MJ is the cost ($10/$30/$60 per month although $10 will suffice for most people). Honorable mention - https://www.bluewillow.ai/ which isn't quite as good as MidJourney but works very similar, uses the same prompting system and has one big benefit - it's free!

4. **Adobe PhotoShop AI - https://www.adobe.com/uk/products/photoshop/generative-fill.html**
As recently as two weeks ago, many were predicting the death of Adobe (they have many tools, but their marquee app is Photoshop). Why so dire? Because *why would you need to spend weeks tweaking an image with complex filters and menus.. when AIs like MidJourney can just create a new image from scratch!*? Well.. all that changed in the final week of May 2023, with the release of Photoshop AI (and specifically its "generative fill" feature). Simply highlight an area & type ("red hair"), and watch as the AI spits out three variation images. It's also very powerful at extending an image. eg. take an AI image you made with MidJourney (or any stock photo), let's say of a basketball-playing robot - then extend your image with an empty space either-side and type "basketball playing robots", and watch as the AI extends your 1:1 image into a 3:1 masterpiece. Only downside? It's $30/month. But.. it does come with a trial. If you do any image editing though, this is an instantaneous must-have. It aunched right in at #4 as soon as it went live. NOTE: this is currently a BETA feature - so you will need to get your trial and get the "beta" version of Photoshop to use GEN-AI features..

5. **ElevenLabs - https://beta.elevenlabs.io/voice-lab**
The best AI voice generation tool right now. Clone voices, create voices from scratch. Extremely powerful - especially when chained with something like Remixable Copywriter VSL script > ChatGPT remix it to new niche > Elevenlabs voice-over > Remixable video > Remixable website, to make pages and videos like this in around 1-2 hours.

6. **Leonardo AI- https://leonardo.ai/**
   The best, most consistent graphics tool for using the "Stable Diffusion" model. Again has the added benefit of being free! This one is technically a "waiting list" although in practice, it only takes 24-48 hours so go ahead and request your invite now. Leonardo has a great free plan, so if you're on a budget and just want a quick way to make AI graphics with no fuss, then this + my VinciVisions app could be your simple win.

7. **Kaiber https://www.kaiber.ai/ + Runway ML- https://runwayml.com/**
   Both video creation tools. Runway's "GEN-1" feature and Kaiber both let you upload a video (eg from a stock photo website like Pexels) and then enter a text prompt or image to style your video. Runway now allow you to create up to 15 secs of video at a time, but I currently prefer Kaiber for "remixing videos in new styles". However, Runway does have MANY different features I've barely had time to play with (like the green screen background removal and interpolation which merges images into a seamless transition) Could have played a bigger part in the SearchGPT sales video.. Alas maybe next time). Runway also rolled out a mobile app, so check that out.

8. **PlaygroundAI- https://playgroundai.com/**
   Powerful tool running Stable Diffusion. Has inpainting/edit feature, but IMHO not quite as good as Leonardo (and nowhere near as good as Photoshop). This does give you more flexibility though, so if you're a big artist or just want to pull back the hood & go "full nerd," this could be the Diffusion model for you.

9. **OpenAI Playground- https://platform.openai.com/playground**
   Run Chat-GPT from a different interface. That's useful if you hit a limit (it's paid, so pretty much always "on"). The playground also lets you enter a "system" message like "pretend you are a pro copywriter" for extra control…

10. **Canva AI - https://www.canva.com/**
   Announced a whole suite of AI tools in a big "create" event a few weeks back. VERY powerful when combined with MidJourney (create in MJ, edit in Canva AI). Their "AI Image Editor" is exceptionally good and provides the best inpainting. Simply import an image, click "edit image", choose the AI editor and then enter a command (eg "put glasses on robot"). AI feature only available with their pro plan ($10 month) and it only allows 100 edits per day. Trust me, I found out the hard way! CanvaAI has now dropped a space (owing to Photoshop AI), but CanvaAI's inpainting is still very good - just not on the insane level of Photoshop (plus its ⅓ the price of PS!)

7. Getting The Best From AI In 2023

There are a number of AI tools that I use (well, I use them all!) But the two in particular I recommend are Chat-GPT and MidJourney. Also... Photoshop (image editing is vital for designers and image editors & ElevenLabs for content/sales videos (for voice). Plus,, LeonardoAI (images), PlaygroundAI (images), BlueWillow (images) & ElevenLabs have **free** plans. If you're on a budget, here are my recommendations...

SOMEWHAT LIMITED BUDGETS...
👉 *"I have no money at all"* - get Chat-GPT and use Bing Chat. If...
👉👉 *"I can only afford $20/month"* - get Chat-GPT Plus and get BlueWillow instead of MidJourney (same prompts work)
👉👉👉 *"I can only afford $30/month"* - get Chat-GPT Plus + MidJourney basic plan

SERIOUS ABOUT MONEY MAKING...
💪🤖👉 *"I am serious about AI, and want the best"* 👉 first get Chat-GPT Plus. Then get Remixable AI (see below). Next, get MidJourney. Next, get either Adobe Photoshop AI or Canva Pro (to access the AI inpainting and editing of images). FInally, consider Runway ML or Kaiber AI for video. Use all these tools & stay subscribed - I'm hearing some big updates are happening this summer! ☀️☀️

8. Final Thoughts

Be sure to check out **Remixable**, my marquee software.

Remixable is the all-in-1 software I used to build ALL pages + videos for AICommissions! Everything including the software was built with Remixable, Chat-GPT, MidJourney, ElevenLabs, PhotoshopAI and Dall-E.. Exactly as described in the Remixable training videos!

Basically, Remixable + AI is how I did ALL of the funnel!

- Check out [Remixable (now with AI preloaded) here](#)

- Check out the "[How I made $65k webinar here](#)"

OK, keep your eye on your email. Big updates dropping in summer 2023 & beyond!

Thanks, Chris
